Course Description
MEDD6390 Innovation and development of instructional design in mathematics

Course description
This course focuses on research and development of educational design in mathematics. By analysing cases of pedagogical practice and innovation, students will understand and reflect on principles and theoretical frameworks guiding the process of developing mathematics pedagogy. There will be study of task design, involving different tools and representations, situated in various contexts of mathematics learning, from the perspectives of teachers, designers and researchers. Special attention will be given to the role of digital technology in shaping the goals and means of developing mathematics instructions and building learning environments.   **Coursework / Examination ratio:**   100   % Coursework,   0   % Examination

Course objectives
 Please refer to the course description above

Course learning outcomes
1. explore the principles and theories underlying educational design in mathematics   2. critically review cases of development and innovation in mathematics pedagogy   3. understand the impact of digital technology on mathematics instructional design and curriculum goals

Course assessment methods

Assessment method	Type of assessment (e.g. description of assignment)	Weighting (%)	Aligned course learning outcome(s)
	Group work		
	Individual essay		

Course content and topics

- Task design
- Tools and artefacts
- Modelling
- Concept development
- Mathematical thinking
- Pedagogic constructs
- Learner diversity
- STEM education
- Teacher, Research, Designer

Required / recommended readings and online materials (to be entered in the SIS / Moodle)
